FOR GREEN COFFEE IMPORTERS, ROASTERS AND COOPERATIVES

Collect it once. Answer the law, the label and the report.

Two coffee corridors, tracked plot to roast: Sidama, Ethiopia to Hamburg, and Marcala, Honduras to Oslo. Every rule checked from the same data.

Two-corridor walkthrough · swipe →

WHAT CHANGED

Every buyer, label and regulator now asks "which plot did this coffee come from?"

1. **The law.** EUDR due diligence for coffee placed on the EU market from 30 December 2026; supply-chain laws such as Germany's LkSG and Norway's Transparency Act.

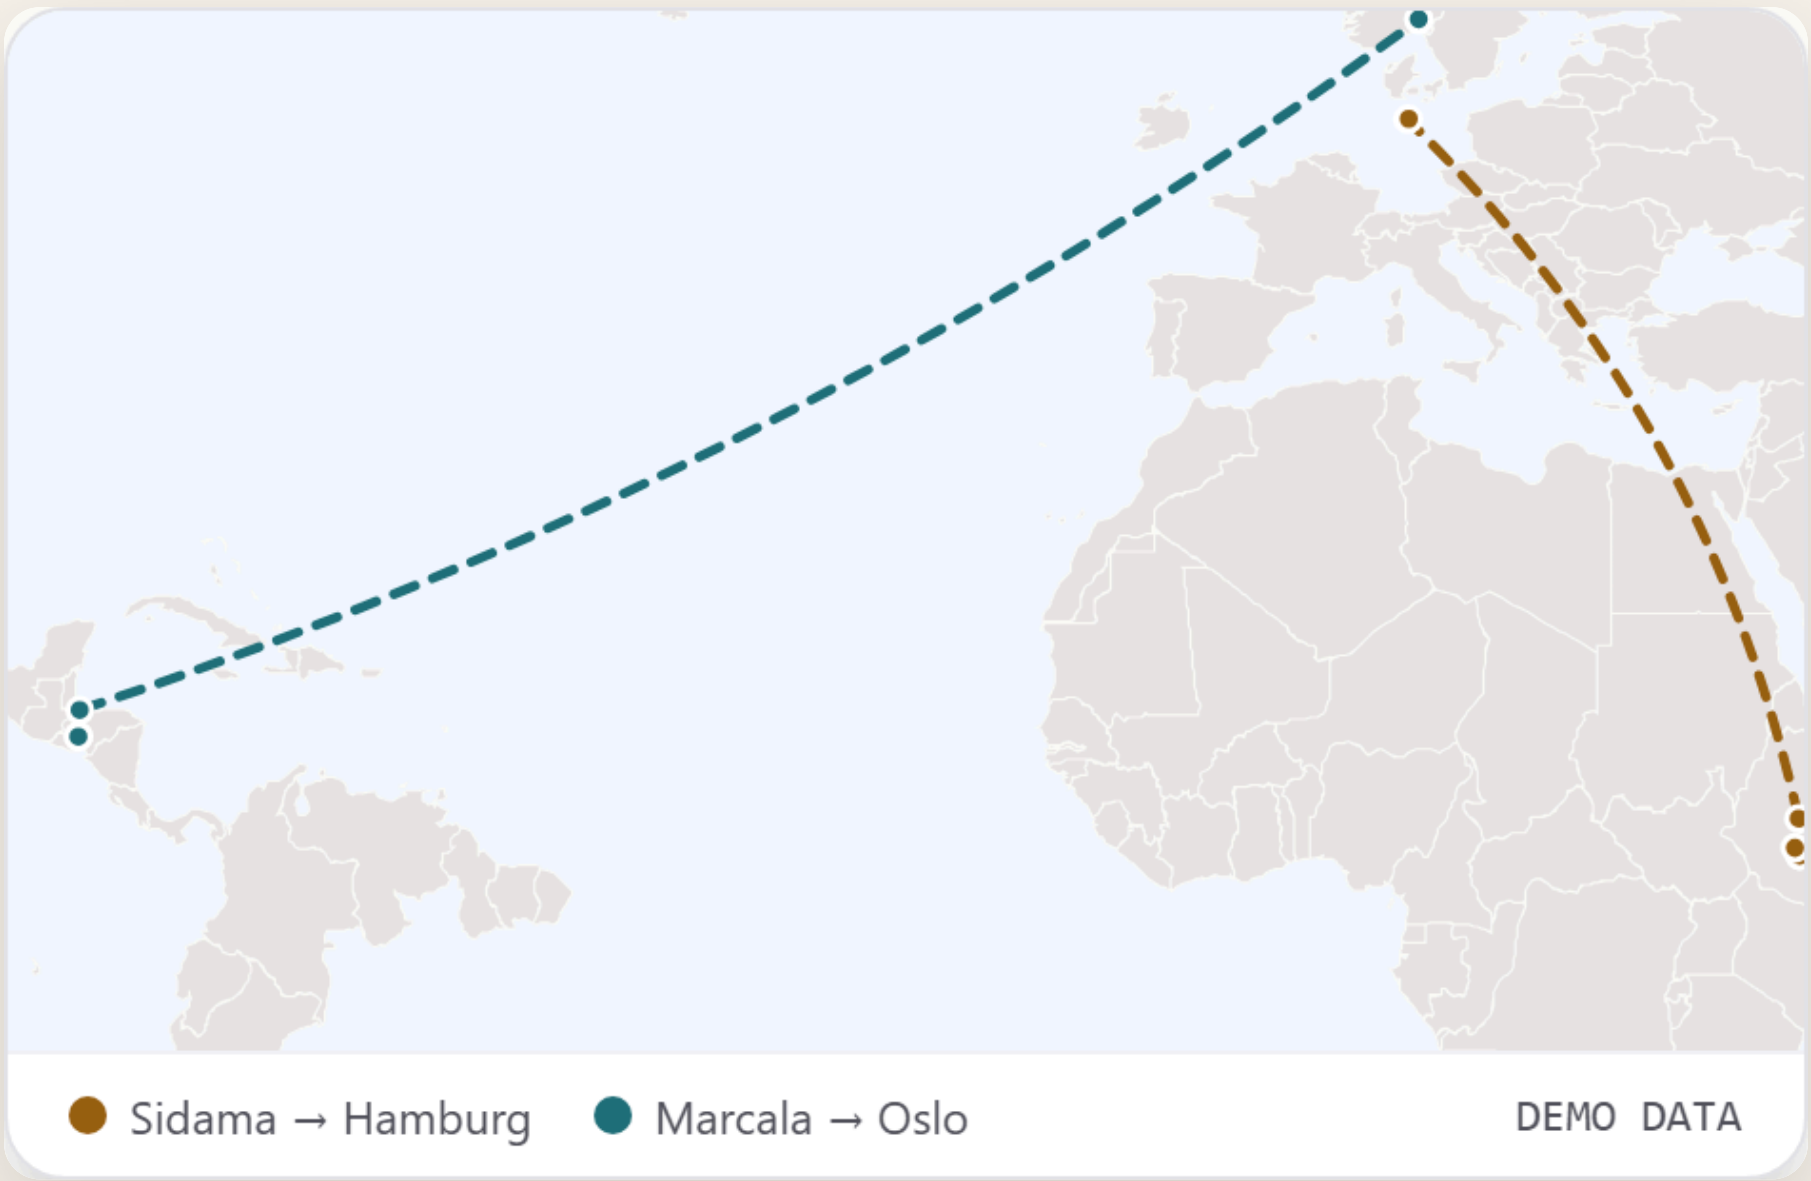

2. **The label.** Rainforest Alliance, Fairtrade, EU Organic and 4C each ask for plots, people and paperwork in their own format.

3. **The report and the claim.** Emissions reporting and the new EU rules on green claims want the same evidence behind the words on the pack.

Same coffee, same plots. Asked for again and again.

1 · TWO CORRIDORS

Sidama to Hamburg. Marcala to Oslo. Six companies, one network.

Cooperative, exporter and roaster on each side, every site pinned, every hand-off under a grant both companies agreed.

SYNTHETIC DEMO DATA · fictional organisations · evidence readiness, not certification

2 · SEAL EVERY HANDOFF

Plot, washing station, dry mill, exporter, roaster: every step proven on a public ledger.

1 **Harvest** Cooperative · Bensa washing station 10 Nov 2025
6 harvests from mapped plots, each lot tied to its plot polygon and farmer.
sealed

2 **Washing** Cooperative · Bensa washing station 25 Nov 2025
Two washing stations merge cherry into parchment; yield recorded.
in 6,450 kg | out 1,303 kg | sealed

3 **Dry mill** Cooperative · Hawassa dry mill 10 Jan 2026
Parchment merged into one green export lot; lab results attached.
in 2,407 kg | out 1,926 kg | sealed

4 **Export** Exporter · Addis Ababa export warehouse 25 Jan 2026
Hand-off to the exporter under a node grant and a product (SKU) link.
sealed

5 **Import** Importer · roaster · Hamburg import 10 Mar 2026
Held at the gate until the SKU link existed, then released and sealed.
sealed

6 **Roast** Importer · roaster · Hamburg roastery 2 Apr 2026
Roast lot linked back to every plot; 250 g and 1 kg retail packs.
in 1,200 kg | out 1,008 kg | sealed

SYNTHETIC DEMO DATA · fictional organisations · evidence readiness, not certification

3 · HOLD IT BEFORE THE BLEND

A lot from a plot with tree-cover loss after 2020. Held at the Hamburg intake.

A-X · HELD

Held at the Hamburg intake

A lot from a plot with simulated tree-cover loss after 2020 travels all the way to Hamburg. It is held at intake and kept out of the blend: the EUDR deforestation check is missing for it, and met for the blend.

A-F · OPEN QUESTION

An open question, shown as one

Coffee from a semi-forest plot. The EU's guidance on whether small-scale coffee under forest counts as agricultural use leaves this case open, so the lot carries an open question instead of a guessed answer.

Held, then released. The exporter's shipment into Hamburg stopped at the gate because the two companies had not yet linked their products. The exporter added the link, and the hand-off completed and was sealed on its own.

An open question is shown as one, not guessed. A hand-off with no product link waits at the gate, then seals once the link exists.

4 · CHECK THE CERTIFICATE, NOT THE LOGO

A Fairtrade certificate that expired before harvest. The lot ships, without the claim.

B-X · SHIPS WITHOUT THE CLAIM

Certificate expired before harvest

The group's Fairtrade certificate ran out before this lot was harvested. The lot keeps its EUDR evidence and ships, but it cannot carry the Fairtrade claim.

B-N · CLAIM BLOCKED

Organic lot with no certificate of inspection

An organic lot reaches Oslo without its certificate of inspection. It can still be sold, just not as organic: the gap only matters when the claim is made.

Certificates are held with their dates. An organic lot with no certificate of inspection can still be sold, just not as organic.

SYNTHETIC DEMO DATA · fictional organisations · evidence readiness, not certification

Must, Mark, Report, Claim: the law, the label, the report and the words on the pack.

Must

THE LAW

What a government requires before the coffee can be sold or the company can trade.

EUDR	TOP 5
LkSG	Germany
Norway Transparency Act	Norway

Mark

THE LABEL

Certifications a brand uses to sell: the seal on the bag, the audit behind it.

Rainforest Alliance	TOP 5
Fairtrade	TOP 5
EU Organic	TOP 5
4C Code	TOP 5
Bird Friendly	Scheme
C.A.F.E. Practices	Scheme

Report

THE SUSTAINABILITY STORY

Numbers a company publishes: emissions, targets, due-diligence accounts.

CSRD / ESRS	EU
GHG Protocol LSR	Voluntary
SBTi FLAG	Voluntary

Claim

THE WORDS ON THE PACK

Rules on what a green or social claim may say, and the proof it needs.

ECGT / UWG (DE)	Germany

The five most asked for in coffee: EUDR, Rainforest Alliance, Fairtrade, EU Organic and 4C.

6 · COLLECT IT ONCE

92 → 41

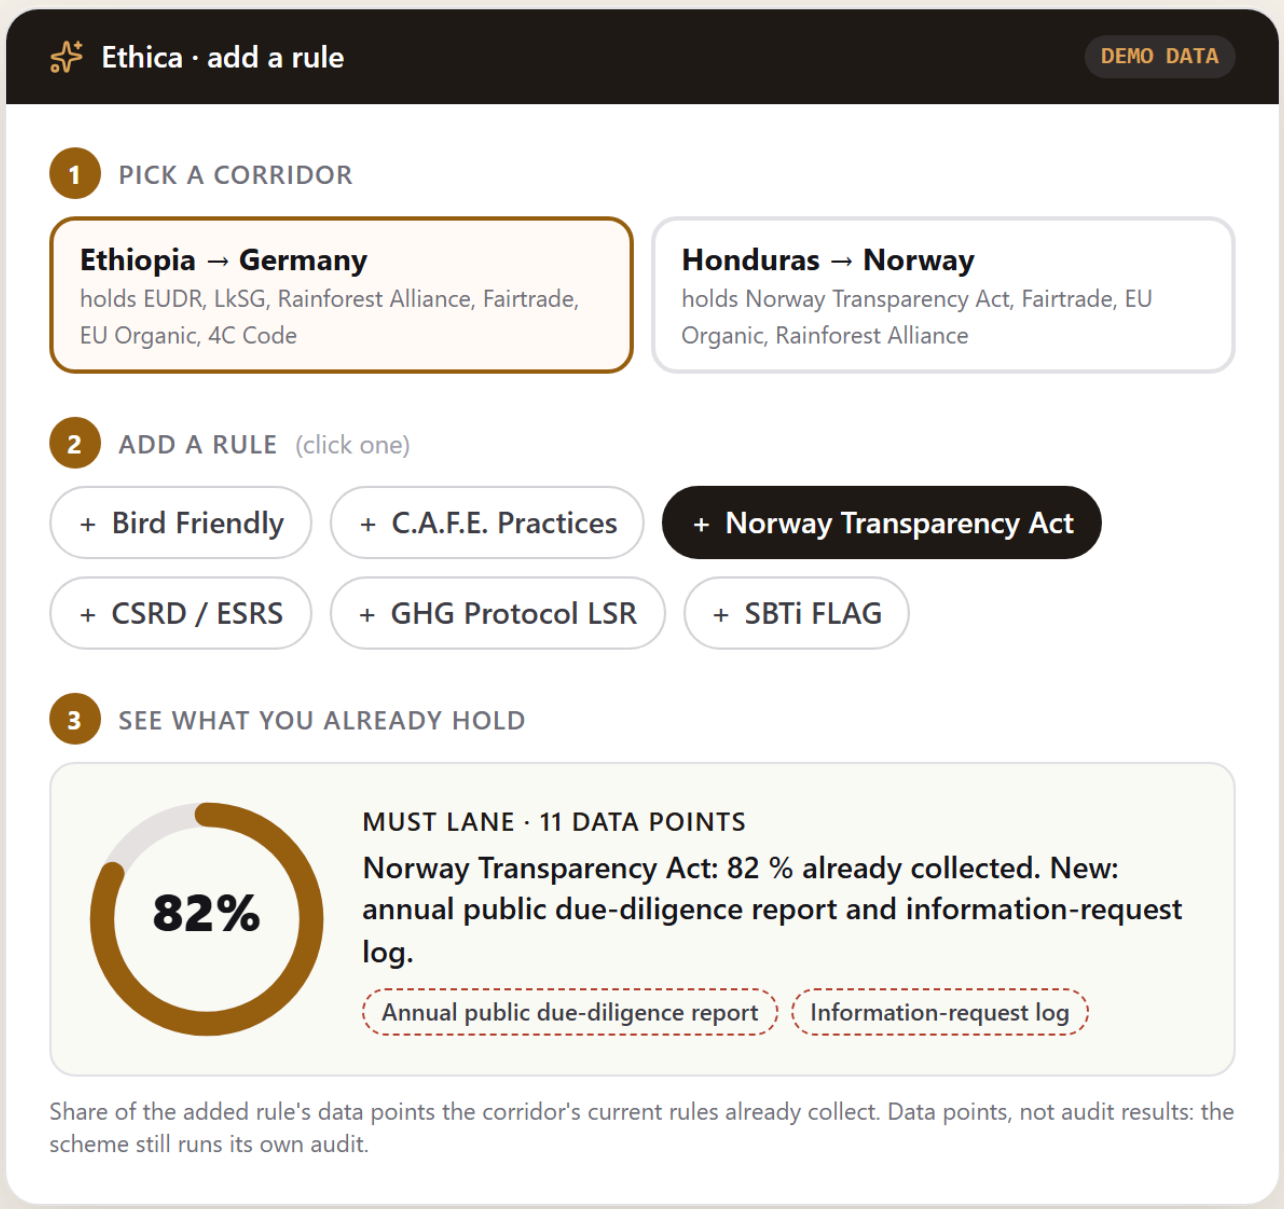

The top five coffee rules ask 92 separate questions. They need **41 unique data points**, 12 of them straight from tracking.

Germany corridor	**124 → 50**
Norway corridor	**72 → 35**

AI reads each rule and quotes the clause, maps it to one shared dictionary, and checks it against the tracked lots. A person approves every requirement before it is used.

7 · ADD A RULE

One more rule? See what you already hold.

+ C.A.F.E. Practices	100 %
+ Norway Transparency Act	82 %
+ CSRD	67 %
+ Bird Friendly	50 %

Against the Germany corridor's law + label rules · data points already collected, not audit results

WE HAVE DONE THIS BEFORE

Ten years of tracking, now read against every rule.

- ✓ 2016: our founder's previous company traced and tagged coltan from Katanga, through Kalemie, to the refinery.
- ✓ Every lot proven on a public ledger before the next hand-off.
- ✓ The same platform runs gold, renewable fuels, cocoa and coffee.

Demo data, real platform. Your corridor in a 30-minute walkthrough.
